Elements Of Data Science - F2021

Week 3: Pandas, Data Exploration and Visualization

9/27/2021

TODOs

- Read Practical Statistics for Data Scientists, Chapter 3 EBSCO
- (Optional) Seaborn Tutorial https://seaborn.pydata.org/tutorial.html
- (Optional) Data Science From Scratch, Chapter 5,6,7 EBSCO
- Complete Week 3 Quiz

• HW1 out this week, includes questions on Hypothesis Testing

TODAY

- Pandas
- Data Exploration
- Visualization in Python

Questions?

Environment Setup

Environment Setup

```
In [1]: import numpy as np
```

Pandas is an open source, BSD-licensed library providing:

- high-performance, easy-to-use data structures and
- data analysis tools

Pandas is an open source, BSD-licensed library providing:

- high-performance, easy-to-use data structures and
- data analysis tools

```
In [2]: # usually imported using the alias 'pd'
import pandas as pd
```

Pandas is an open source, BSD-licensed library providing:

- high-performance, easy-to-use data structures and
- data analysis tools

```
In [2]: # usually imported using the alias 'pd'
import pandas as pd
```

- Primary datastructures:
 - Series: 1D array with a flexible index
 - Dataframe: 2D matrix with flexible index and column names

```
In [6]: # create Series from array and set index
s = pd.Series([1,2,3],index=['a','b','c'],name='Example_Series')
S
Out[6]: a   1
b   2
c   3
Name: Example_Series, dtype: int64
```

```
In [6]: # create Series from array and set index
s = pd.Series([1,2,3],index=['a','b','c'],name='Example_Series')

Out[6]: a    1
b     2
c     3
Name: Example_Series, dtype: int64

In [7]: s['a']
Out[7]: 1
```

```

Questions?

Exploratory Data Analysis

Exploratory Data Analysis

For a new set of data, would like to know:

- amount of data (rows, columns)
- range (min, max)
- counts of discrete values
- central tendencies (mean, median)
- dispersion or spread (variance, IQR)
- skew
- covariance and correlation ...

Yellowcab Dataset

- Records of Yellowcab Taxi trips from January 2017
- more info: https://www1.nyc.gov/site/tlc/about/tlc-trip-record-data.page

Loading Datasets from CSV (Comma Separated Values)

- columns separated by delimiter, eg. comma, tab (\t), pipe (|)
- one row per record, observation
- often, strings quoted
- often, first row contains column headings
- often, comment rows starting with #

Loading Datasets from CSV (Comma Separated Values)

- column names, number of filled values, datatypes
- number of each datatype seen
- size of dataset in memory

- Numeric (eg. weight, temperature)
 - usually has a zero value
 - describes magnitude

- Numeric (eg. weight, temperature)
 - usually has a zero value
 - describes magnitude
- Categorical (eg. class, variety)
 - usually a finite set
 - no order

- Numeric (eg. weight, temperature)
 - usually has a zero value
 - describes magnitude
- Categorical (eg. class, variety)
 - usually a finite set
 - no order
- Ordinal (eg. Likert scale, education level, etc.)
 - usually a finite set
 - has order
 - usually missing zero
 - difference between levels may not be the same
